

Driiva Brand & Marketing Playbook

Beta Launch Strategy: 500 iOS Test Users | Feb–Apr 2026

Brand Position

One line: Driiva is premium telematics insurance for everyone—cinematic craft, transparent AI, community refunds.

What we're not: We're not "budget" insurance or comparison-site commodity. We're not exclusive-luxury gatekeeping. We're not another black-box tracker.

What we are: We make fair pricing and refunds feel inevitable through beautiful product design and honest data. Premium accessibility. Art meets price quote.

Positioning statement:

"Driiva turns your everyday driving into a community safety score. When you and drivers like you do well, the surplus goes back to you—faster, fairer, and with full transparency. We're a UK motor insurer built with cinematic craft and ruthless simplicity."

Target: 22–35, urban/near-urban UK drivers who already trust Monzo/Revolut design language, value transparency over gimmicks, and want insurance that respects their data and attention.

Creative Principles (Filmsupply 2026 Applied to Driiva)

1. Keep it stupid cinematic

- One strong visual idea per asset. No clutter.
- Calm compositions, minimal motion, documentary-real UK environments.
- Example: night-time windscreen, rain, phone glowing with Driiva score. That's the shot. Nothing else competes.

2. Keep it human

- Real drivers, real phones, real weather.
- Documentary authenticity over stock-footage perfection.
- Cast for diversity without performative signalling—just show the UK as it actually is.

3. Analog warmth + subtle surrealism

- Slight VHS grain, Y2K textures for nostalgic resonance (target demo grew up with this).
- Conceptual surrealism in micro-doses: glowing "refund pool" orbiting a car, receipts dissolving into light, time-lapse UK roads with floating UI elements.
- Never random—every surreal choice visualises an abstract value (fairness, time saved, money returned).

4. Cohesive multi-frame for social

- Split-screen / grid layouts: driver cam / map / refund balance.
- Matches how audiences already consume TikTok/IG—dense info, tight pacing, visual clarity.

5. Music as narrative device

- Solo instrumentation (piano, cello, single drum) or understated jazz.
 - Lyrics when they earn it—storytelling through song, not generic background.
 - Silence and space matter as much as sound.
-

Core Messaging

Tagline options

- "Drive well. Get money back."
- "Insurance that remembers the days nothing went wrong."
- "Telematics, minus the black box."

Short explainer (50 words)

Driiva is a UK telematics insurer that turns your driving into a community safety score. When you and drivers like you perform well, the pool surplus returns to you as cash refunds—not points, not vouchers, actual money. Transparent AI, iOS app, zero black-box hardware.

One-liner for intros

"We're building the Monzo of car insurance: premium design, transparent pricing, community refunds. Starting with 500 iOS beta drivers."

What we don't say

- "Cheapest" (we're fair, not a race to the bottom).
- "Exclusive" (premium ≠ gatekeeping).
- "Revolutionary" (save the hype—show the refunds).

Beta-Only Lever: Early Refund Guarantee (ERG)

Context: ERG is a beta-exclusive safety net, not a permanent product feature. Use it to de-risk sign-ups and demonstrate confidence in our models.

Messaging framework:

- "If our telematics model doesn't deliver the savings we project for you, we refund you early—no 12-month wait."
- Always paired with: clear caps, eligibility criteria, and "this is a beta incentive" framing.

Where to use:

- Beta landing page (above fold).
- Paid ads targeting the first 300 sign-ups.
- Email flows (welcome + mid-beta check-in).

Where NOT to use:

- Brand-level assets (posters, general social posts).
- Post-beta evergreen content.

Compliance line (always visible near ERG claims):

"Early Refund Guarantee applies to beta participants only. Subject to eligibility criteria and caps. Not a guaranteed profit scheme."

GTM Strategy: 500 Beta Drivers in 10 Weeks

Objectives

- Fill 500 iOS beta slots in <6 weeks.
- Achieve $\geq 60\%$ week-4 retention.
- CAC to fully onboarded beta driver: <£25.
- Waitlist-to-policy conversion: $\geq 15\%$.

Kill / double-down criteria**Double down if:**

- Beta fills in <6 weeks + >50% weekly active users.
- $\geq 40\%$ opt into ERG messaging + complete ≥ 1 safety mission.

Kill / pivot if:

- CPA >£50 for 3 consecutive weeks.
- Week-4 retention <60%.

Channel strategy

Website (driiva.co.uk)

Purpose: Credibility + conversion.

Key blocks:

- Hero: "Drive well. Get money back." → Subhead: "Join 500 early drivers testing our iOS telematics app." → CTA: "Claim a beta spot."
- Visual: Single cinematic shot—night UK street, rain on windscreen, phone on dash with Driiva score glowing.
- ERG explainer block: Short, plain-English, with compliance footer.

X (Twitter) – 1–2 posts/day

Tone: Dry, warm, precise. Product-brain, not meme-brain.

Post types:

1. Launch thread

"Most telematics feels like surveillance. We built Driiva to feel like a coach who pays you back when you drive well. 500 iOS beta spots. ERG if our models don't deliver. [Link]"

2. POV statements

"Insurance has one job: price risk fairly. If your app can't explain why it priced you that way, it's not intelligent. It's just obscure."

3. Data snippets

Screenshot of projected refund balance with caption: "You're not imagining it. That is, in fact, money with your name on it."

TikTok – 3–5 videos/week

Style: Vertical, handheld, analog-leaning (VHS grain), documentary-real UK settings.

Formats:

1. "Drive With Me" mini-docs (20–40s)

- Hook: "Can your insurance pay you back for not crashing?"
- Cut: driver POV, phone overlay with Driiva app, solo piano/cello, simple VO.
- Outro: "Testing with 500 iOS drivers. Link in bio."

2. Conceptual surrealism spots

- Long-exposure tail-lights, ghostly "refund balance" digits swirling into clean UI.
- Caption: "Time moves fast. Refunds shouldn't."

3. Parking-lot explainers

- Founder in parked car, one shot, no cuts: "30 seconds on why we built ERG first."

Instagram – 3 feed posts/week, 3–5 Stories, 2 Reels

Grid strategy:

- 1x cinematic still (film photography aesthetic).
- 1x typographic explainer (glassmorphic card, one promise).
- 1x user-facing stat/projection ("Refund pool estimates for the first 500").

Example captions:

- Cinematic still: "You're already driving well. Your insurer just isn't paying attention. Driiva notices."
- Typographic card: Header: "Premium for All" | Body: "Cinematic craft. Transparent pricing. Community refunds. Not exclusive. Just fair."

Reels: Repurpose best TikToks; keep music rights clean.

LinkedIn – 2–3 posts/week

Audience: Regulators, partners (Root, ProMGA), investors, early talent.

Angles:

1. Product + regulation: "Designing telematics models our actuaries and the FCA can both audit line-by-line."
2. Beta insights: "What we'll learn from our first 500 drivers: risk distribution, refund elasticity, engagement."
3. Culture/design: "Why our insurance app looks more like a wellbeing product than a form."

Example post:

"Telematics shouldn't feel punitive. In our 500-driver iOS beta, we're

testing community safety scoring, explainable AI, and transparent refund pools—with an Early Refund Guarantee if our models miss the mark."

Email – 1 welcome + 3 beta emails across 10 weeks

Tone: Human, lightly designed (plain text or minimal templates).

Flows:

1. Welcome (on sign-up)

Subject: "You're early. That matters."

Body: "Thanks for joining Driiva's 500-driver beta. We'll share: when your iOS app is ready, how ERG works, and what we're learning from the cohort. No spam. No generic safety tips."

2. Beta live

Subject: "Your Driiva beta spot is ready"

Body: One paragraph + download CTA + ERG explainer (2 lines).

3. Mid-beta update

Subject: "How your driving is shaping the pool"

Body: Simple chart + 3 insights on cohort behaviour.

Public / OOH / Stickers – low-cost, high-signal

Sticker concepts (for laptops, cars, campus lamp posts):

- "I brake early. I get paid for it."
- "This car is in the refund pool."
- "Telematics, but not creepy."

Design: Monochrome/duotone, bold type, tiny Driiva logo, subtle analog motif (scanlines, VHS timestamp).

Light OOH (near London uni/co-working hubs):

- Poster: Big line: "Most insurers forget the 364 days you drove well." | Small line: "We built Driiva for those days." | QR → beta waitlist.

Paid Ads (Meta, TikTok) – ERG + scarcity

Objective: Cheapest path to 500 users with high engagement.

Ad angle 1: ERG

- Visual: Clean UI, refund balance highlighted, solo piano background.
- Copy: "If our telematics doesn't deliver the value we model, we refund early. Test it with 500 iOS drivers. [Link]"

Ad angle 2: Anti-black-box

- Visual: Black cube dissolving into transparent Driiva interface.
- Copy: "No black box. Just an app that shows you how your driving affects your price and refund."

Content Calendar Cadence (10-Week Beta)

Week	Focus	X	Tik Tok	IG	LinkedIn	Email
1–2	Launch + ERG narrative	2/d ay	5 vids	3 posts, 2 Reels	2 posts	Welcome
3–4	Documentary drivers, referrals	2/d ay	4 vids	3 posts, 2 Reels	2 posts	—
5–6	Community score + projections	1/d ay	3 vids	2 posts, 1 Reel	3 posts	Mid-beta
7–8	Anonymised safety data	1/d ay	3 vids	2 posts, 1 Reel	2 posts	—
9–10	Close beta, Results Cut teaser	2/d ay	4 vids	3 posts, 2 Reels	2 posts	Beta wrap

Brand Assets to Produce

1. Hero launch film (60–90s)

- **Style:** Quartr-inspired poster aesthetic + Keep It Stupid Cinematic.
- **Concept:** Single-day journey of 3 diverse UK drivers, split-screen moments, solo piano score, closing on unified refund pool visual.
- **Deliverable:** 16:9 for web, 9:16 cut for TikTok/IG, 1:1 for feed.

2. Typographic explainer suite (5 cards)

- **Topics:** "What is Driiva?", "Community Safety Score", "Refund Pool Explained", "Premium for All", "ERG (Beta Only)".
- **Style:** Glassmorphic cards, duotone palette, bold sans-serif, minimal text.

3. Sticker pack (3 designs)

- Vinyl, weather-resistant, 3"×5" for laptops/cars/posts.
- Monochrome + accent colour (Driiva teal or cream).

4. OOH poster (if budget permits)

- A2 size, printed on uncoated stock for analog texture.
- Single message + QR code.

5. TikTok/IG Reels bank (10 videos)

- 5× "Drive With Me" docu-style.
- 3× Conceptual surrealism.
- 2× Founder explainers.

Risks & Mitigations

Risk 1: Creative feels too "art," not enough "quote me"

Impact: Engagement without conversion.

Mitigation: Every cinematic asset pairs with direct CTA; weekly creative review against CPA/completion metrics.

Owner: Growth lead.

KPI: Landing CVR >10%, CPA <£25 by week 4.

Risk 2: ERG messaging confuses or over-promises

Impact: Complaints, regulatory friction.

Mitigation: Plain-English copy, clear caps/criteria, mandatory compliance line on all ERG assets.

Owner: Founder + compliance.

KPI: <3% of support tickets are ERG misunderstandings.

Risk 3: Narrow aesthetic limits reach

Impact: Perceived as exclusive rather than inclusive.

Mitigation: Cast diverse drivers, emphasise fairness/accessibility in copy, test "Do you feel this is for people like you?" >4/5.

Owner: Brand/creative.

KPI: Beta demographic mix tracks target segment assumptions.

Risk 4: Burn exceeds runway before PMF signal

Impact: Cash-out before FCA authorisation.

Mitigation: Cap paid media until 300 drivers onboarded; scale only if CAC/retention hit thresholds.

Owner: Founder + finance.

KPI: Monthly burn within projections; CAC:LTV within thesis.

Next Actions

Action	Owner	Dead line	Success Metric
Finalise website hero + ERG block copy	Founder	Feb 20	Live, mobile-optimised
Produce hero launch film (60–90s)	Videographer	Feb 27	Final cut approved, 3 aspect ratios
Design typographic explainer suite (5 cards)	Designer	Feb 25	Production files + web-res exports
Launch X thread + TikTok "Drive With Me" #1	Marketing	Feb 18	>500 impressions, <£1 CPM
Set up paid ad campaigns (Meta, TikTok)	Growth	Feb 22	3 ad sets live, £500 test budget
Order sticker pack (500 units)	Ops	Feb 28	Delivered, ready for distribution

Default-alive checkpoint: If CPA >£50 or retention <60% by week 6, pause paid, double down on organic + partnerships. Do not add surface area without quantified PMF improvement.
